Introduction

This publication is a summary of Vital Statistics of the province of Alberta occuring in 1985 as of June 1986. It includes only events which occured in Alberta. The Division of Vital Statistics was a Branch of the Department of Social Services & Community Health in 1985 and as of May 1986 became part of the Department of Community & Occupational Health.

The review is primarily for the purpose of providing a ready reference to some of the more frequently used Vital Statistics for Alberta. It has only a minimum of an analysis and interpretation of the data.

This Annual Review contains an expanded list of 282 selected causes of death (previously and still reported 72), from the International Classification of Disease (ICD9). This newly expanded list provides more useful information and is now consistant with the data available from Statistics Canada.

The data for this publication was gathered in the Vital Statistics Information Terminal System (VISITS) and I wish to thank my staff for their assistance in compiling this review.

1 Birthrate is very low in Lloydminster because the hospital is located on the Saskatchewan side of the border. Therefore, births to Alberta residents in hospital are not recorded as Alberta events, but will be included in the Statistics Canada figures when out-of-province events are added. This may also affect the death rates as deaths occurring in the hospital would be recorded in the same manner.

GLOSSARY OF TERMS

Vital Statistics:	Records dealing with births, deaths and marriages: all events which have to do with an individual's entrance into or departure from life, together with changes in civil status.
Live Birth:	A complete expulsion or extraction from the mother, irrespective of the duration of the pregnancy, of a fetus in which, after expulsion or extraction, there is breathing, beating of the heart, pulsation of the umbilical cord or definite movement of a voluntary muscle, whether or not the umbilical cord has been cut or the placenta is attached.
Stillbirth:	Fetal death of at least 20 weeks gestation or 500 grams weight.
Gestation:	Time between the conception and birth of an infant, the usual length being 40 weeks.
In-Wedlock:	For purpose of this report, in-wedlock means that the parents of the child are married to each other at the time of the birth, or are subsequently married and have changed the birth registration.
Birth Order:	Number of live births to the mother, including this birth.
Infant Death:	Death of a child between birth and one year of age.
Neo-natal Death:	Death of an infant 28 days of age or less.
Natural Increase:	Excess of births over deaths.
